Dear patients,

welcome to the Asklepios Hospital Bad Abbach and the International Center for Spinal Diseases and Deformities. In our spine center we treat all types of spinal disorders and deformities of the spine for patients of any age. Whenever possible, we prefer to treat them non-surgically. However, if the surgical treatment strategy promises clear advantages, we offer established and cutting-edge technology procedures in spinal surgery for children and adults. Preferably, minimally invasive techniques are applied during surgery. We want to listen to our patients and understand their spinal problems, so we are able to offer a sustainable treatment plan. Feel free to contact us either by e-mail or by phone.

Sincerely,
Your
Prof. Dr. Heiko Koller und Dr. Robert Morrison

Comfortable equipment and the best medical care

The new wing of the building was inaugurated in July 2020. The bright and very comfortably and modernly equipped patient rooms ensure a pleasant stay in our modern clinic. In addition, the Asklepios elective service concept „Comfort Plus“ offers patients first-class medical and nursing care as well as a high level of service. Stylish single and double rooms in the Privita ward, a high level of personal and medical care and special service offers are guaranteed by the elective service „chief physician“ and ensure the best care all around. Culinary comfort along with exclusive lunch menus from a star chef, coffee and cake in the afternoon or fresh fruit and snacks take your stay to the next level.

w

By the way, elective services are available to anyone who has private health insurance, is entitled to assistance or has taken out supplementary insurance. In addition, all patients can book optional services at their own cost.

The International Center for Spinal Diseases and Deformities

No matter whether you have a vertebral fracture or a scoliotic or kyphotic deformity of the spine - many complaints can be treated perfectly well without surgery. If the conservative measures do not lead to an improvement of the complaints, surgical therapies must also be considered. In our clinic, the choice of treatment method is tailored to each individual patient! This is why we take plenty of time for the examination, for individual treatment planning and for the consultation of our patients.

Center for rehabilitation - It's right next door!

For decades, patients have benefited from the close links between the orthopedic surgical and rehabilitation sectors. The close proximity is a great advantage and facilitates the seamless transition between the two periods of care. The elective service concept also applies to rehabilitation. It is very important for the healing process that our patients feel comfortable. That is why we offer a wide range of optional services to make them happier and thus recover faster.
